QUICK FLEX® Couplings

Better Performance. Less Maintenance.

Highly Engineered Solutions

With its longstanding reputation for innovation, service and quality-driven work performance, Lovejoy has developed the expertise to engineer products that address the complex needs of its customers' applications. No matter what the application, Lovejoy has the selection, service and solution for it.

Lovejoy continuously adds to their power transmission elastomeric and metal coupling offerings with the manufacturing of universal joints, variable speed pulley products, Uniflex, Torsional, S-Flex, Deltaflex, Gear, Grid, Disc, Curved Jaw, Jaw In-Shear and Motion Control, as well as the newest addition, the QUICK FLEX coupling, and for the hydraulics industry a full line of couplings, reservoirs and accessories, oil coolers, and pump / motor mounts. Lovejoy also offers RunRight® products, which function as either a vibration control, spring action, tensioning device or bearing alternative.

Global in Reach, Service and Support

Lovejoy has grown to become an international market leader by expanding its reach into the global marketplace. Lovejoy products are available through a network of distributors, which are located in every major market throughout North America and in over 80 other countries. Lovejoy ships more than 100,000 components each week. These components are exported globally – to Africa, Asia, Australia, Eastern and Western Europe, Central and South America, the Caribbean and the Middle East, as well as throughout North America. World headquarters are in Downers Grove, Illinois, USA with more than 400 employees worldwide, as well as business operations located in the United States and Germany.

Lovejoy World Headquarters in Downers Grove, Illinois USA

Lovejoy continues to innovate and improve their products to optimally serve the many industries it supports.

Our Commitment to Customers...

Lovejoy has a worldwide reputation for building and sustaining long-term customer satisfaction through quality of service, products and design reliability. Certified to ISO 9001 International Standards for Quality Management, Lovejoy manufactures all of its products to the exacting requirements of international standards such as AGMA, ANSI, SAE, DIN, JIS and Imperial. Lovejoy is also an accepted supplier of products that match military specifications.

WARNING

Failure to observe the following warnings could cause the power transmission product to break and parts to be thrown with sufficient force to cause serious injury or death.

Selection. Do not exceed catalog ratings. Refer to the Lovejoy catalog for proper selection, sizing, horsepower, torque range, and speed range of these products.

Installation. Proper maintenance, handling, and shop practices are critical. Follow all installation instructions included with the product and provided by your equipment manufacturer, and all applicable federal, state, and local regulations concerning the safe operation and maintenance of manufacturing equipment.

Operation. Avoid sudden shock loads during start up and operation.

Do not operate a coupling assembly with improper alignment or bolt torque or with damaged or worn elastomeric elements. Inspect the assembly for these conditions shortly after initial operation and periodically thereafter.

The coupling assembly should operate quietly and smoothly. If the coupling assembly vibrates or makes a beating sound, shut down the equipment immediately and recheck the alignment.

Disclaimer

This catalog is provided solely to give you analysis tools and data to assist you in your product selection. Product performance is affected by many factors beyond the control of Lovejoy. Therefore, you must validate the suitability and feasibility of all product selections for your applications.

Lovejoy does not manufacture or sell power transmission products for elevators, man lifts, or other devices that carry people. We make no representation or warranty concerning such uses disclaim all liability for harm that might result from the use of our products in those applications.

Lovejoy products are sold subject to Lovejoy terms and conditions of sale (view at www.lovejoy-inc.com/resources), which include our limited warranty and remedy. Please consult with your Lovejoy engineer for more information and assistance.

Every reasonable effort has been made to ensure the accuracy of the information in this writing, but no liability is accepted for errors, omissions or for any other reason.

If you have any questions, contact the Lovejoy Engineering Department at 1-630-852-0500.

QUICK FLEX® Couplings

Durability

When your equipment operates in harsh environments, you need products you can count on, like QUICK FLEX® elastomeric couplings. They are durable enough to face extreme challenges, yet need minimal maintenance. They are also easy to install and require no lubrication. With a lifespan that may last as long as your equipment, overall cost of ownership remains low.

Pioneering Design

QUICK FLEX couplings' innovative design features two steel hubs, a polyurethane insert and a cover.

Our styles include:

- Standard couplings
- Single-ended spacer couplings
- Double-ended spacer couplings

Whatever your application, you'll find a coupling to suit your needs:

- Fifteen sizes with max bores up to 505mm, or 20 inches
- Continuous torque handling from 43 Nm (377 in-lbs) to 610,529 Nm (5,403,788 in-lbs)
- Able to handle temperatures from -51° C to 176° C (-60° F to 350° F)

Product Advantages

More Uptime

Your hubs and shafts may remain intact when you use QUICK FLEX couplings. Our design helps eliminate mechanical interference between coupling hubs that can damage your equipment. As needed, you can replace the urethane insert quickly and easily without removing the hubs.

Durability

There's no metal-to-metal contact between opposing hubs with QUICK FLEX couplings, so you'll save money not replacing hubs or other metal components since they do not wear. For harsh environments, including wash-downs for food processing, we offer a stainless-steel version of each coupling.

Reduced Inventory

The versatility of the QUICK FLEX design promotes component standardization across your plant, reducing the need to stock multiple coupling styles and configurations.

Product Features

- Solid and split covers handle high speeds and torque
- Design dampens torsional vibration and shock
- Accepts shaft misalignment up to 2 degrees
- Eliminates the need to move or disassemble the driving or driven equipment to replace the coupling insert
- Versatility of design makes it a great tool for plant standardization
- Standard and double-ended spacer couplings available for shaft separations of 25.4 mm to 3,048 mm (1 in to 120 in), for increased application acceptance
- Four bore options available to meet customers' needs; 1) Bored, keyed and set screws style – clearance and interference fit; 2) Bushing style; 3) Splined style; and 4) Mill-motor style
- Stainless-steel versions available for corrosive environments
- Four insert choices for varying torque needs and temperature ranges, up to 177° C (350° F)
- Replaces many common gear, grid and elastomeric couplings used in high- and low-torque applications to reduce plant complexity.
- Inherently balanced from precision machining for high-speed applications
- Split cover options help resist axial separating force under high torque

for the Long Haul

Product Offering

QUICK FLEX couplings stand up to harsh environments and operate efficiently in applications including:

- Motor to gearbox (low torque/high speed)
- Gearbox to driven equipment (high torque/low speed)
- Motors to pumps
- Any drive shaft to a driven shaft

Quality Solutions

As a leading premium bearing and coupling manufacturer, we understand the critical quality link between materials and product performance.

We also strictly adhere to the Quality Management System in every plant worldwide, so each product meets the same high quality standards – no matter where it is manufactured.

Dependable Service

Every QUICK FLEX elastomeric coupling is backed by the service of our industry-leading experts, who are ready to assist you with product design, application knowledge and engineering support – anything you need to help improve uptime and maximize equipment performance.

Updates are made periodically to this catalog. Visit www.lovejoy-inc.com for the most recent version of the QUICK FLEX Coupling Catalog.

Torque Calculation – Selecting QUICK FLEX Couplings

QUICK FLEX Coupling Selection Using Inch-Pound Torque Ratings

To select the correct QUICK FLEX coupling for your application, use the formulas below. If you need further assistance, please contact your Lovejoy Application Engineer or visit www.lovejoy-inc.com.

Design Torque (in-lbs) =
Actual torque (in-lbs) x service factor

$$\text{Actual Torque (in-lbs)} = \frac{63025 \times \text{HP}}{\text{RPM}}$$

where:

HP = Drive horsepower

RPM = Drive shaft revolutions per minute

QUICK FLEX Coupling Selection Using Newton Meter Torque Ratings

To select the correct QUICK FLEX coupling for your application, use the formulas below. If you need further assistance, please contact your Lovejoy Application Engineer or visit www.lovejoy-inc.com.

Design Torque (Nm) =
Actual torque (Nm) x service factor

$$\text{Actual Torque (Nm)} = \frac{9550 \times \text{kW}}{\text{RPM}}$$

where:

kW = Drive kilowatts

RPM = Drive shaft revolutions per minute

Helpful Conversion Formulas

(Nm ↔ in-lbs) → 1 Nm = 8.85 in-lbs

(kW ↔ HP) → 1 kW = 1.341 HP

Notes

Coupling Service Factors for Applications

Suggested service factors listed are typical values based on normal operation of the mechanical power transmission system.

Application	Service Factor
Aerators	2.5
Aggregate Processing, Cement, Mining Kilns	
Direct or on Line Shaft of Reducer	
With Final Drive Machined Spur Gears	2.25
With Single Helical or Herringbone Gears	2.0
Crushers, Ore or Stone	2.75
Dryer, Rotary	2.0
Grizzly	2.25
Hammermill or Hog	2.0
Tumbling Mill or Barrel	2.0
Agitators (also see Mixers)	
Vertical, Horizontal, Screw, Propeller, Paddle	1.25
Barge Haul Puller	1.75
Blowers	
Centrifugal	1.5
Lobe or Vane	1.5
Brewing and Distilling	
Bottle- and Can-Filling Machines	1.5
Brew Kettle	1.25
Cookers, Continuous Duty	1.5
Lauter Tub	1.75
Mash Tub	1.5
Scale Hopper, Frequent Peaks	2.0
Clarifier or Classifier	1.25
Clay-Working Industry	
Brick Press, Briquette Machine, Clay-Working Machine, Pug Mill	2.0
Compressors	
Centrifugal	1.25
Rotary, Lobe or Vane	1.5
Rotary, Screw	1.5
Reciprocating	
Direct Connected	Refer to Equipment OEM
Without Flywheels	Refer to Equipment OEM
With Flywheel and Gear between Compressor and Prime Monitor	
One Cylinder, Single Acting	3.0
One Cylinder, Double Acting	3.0
Two Cylinders, Single Acting	3.0
Two Cylinders, Double Acting	3.0
Three Cylinders, Single Acting	3.0
Three Cylinders, Double Acting	2.0
Four or More Cyl., Single Acting	2.5
Four or More Cyl., Double Acting	2.5

Application	Service Factor
Conveyors	
Apron, Assembly, Belt, Chain, Flight, Screw	1.75

Spinner, Tenter Frame, Winder	1.75
Tumbling Barrel	2.0
Winch, Maneuvering: Dredge, Marine	1.5
Windlass	1.5

Engine Drive Service Factors

Service factors for engine drives are those required for applications where good flywheel regulation prevents torque fluctuation greater than 20 percent. For drives where torque fluctuations are greater or where the operation is near a serious critical or torsional vibration, a mass elastic study is necessary.

To determine an engine drive service factor, first determine the application service factor for motors. Then, use that to find the correct engine service factor in the table below. When the application service factor for motors is greater than 2.0 or where one-, two- or three-cylinder engines are involved, please contact your Lovejoy Application Engineer with complete application details for an engineering review.

Table 1. Engine Service Factor

Application Service Factor	Engine Service Factor	
	4 to 5 Cylinders	6+ Cylinders
1.00	2.00	1.50
1.25	2.25	1.75
1.50	2.50	2.00
1.75	2.75	2.25
2.00	3.00	2.50

Misalignment Tolerances

Inserts

Coupling Inserts

Inserts

QUICK FLEX Coupling Inserts

QUICK FLEX flexible urethane coupling inserts are resistant to most chemicals and available in four materials for varying temperature and torque needs:

QUICK FLEX red insert (standard)

The standard QUICK FLEX red insert is made from a relatively soft urethane compound. This insert is well suited for a wide range of applications. The standard insert excels in vibration dampening and cushioning of shock loads and is best for reversing applications or applications with quick starting and stopping of high-inertial loads. This insert offers an operational temperature range of -50° C to 100° C (-60° F to 212° F) with a 48D durometer.

QUICK FLEX blue insert (high torque)

The QUICK FLEX blue insert is made from a relatively stiff urethane compound. This insert is well suited for applications with moderate to high torque. QUICK FLEX couplings with the blue insert deliver high torque while maintaining a degree of torsional softness and the ability to dampen vibration. They are excellent replacements for gear, grid or chain-style couplings. This insert offers an operational temperature range of -50° C to 100° C (-60° F to 212° F) with a 60D durometer.

QUICK FLEX black insert

(highest torque)

The QUICK FLEX black insert offers the highest torque ratings of any of our inserts. This insert is well suited for very high torque applications, and QUICK FLEX couplings with a black insert are excellent replacements for gear-style couplings. This insert offers an operational temperature range of -50° C to 100° C (-60° F to 212° F) with a 68D durometer. When using a high-speed cover, the use of a black insert is not recommended. In an application where high torque is present, use a split cover option.

QUICK FLEX white insert

(high temperature)

The QUICK FLEX white insert is made of a heat-resistant urethane compound for use in applications where heat is a concern. This insert offers an operational temperature range of -50° C to 177° C (-60° F to 350° F) with a 60D durometer.

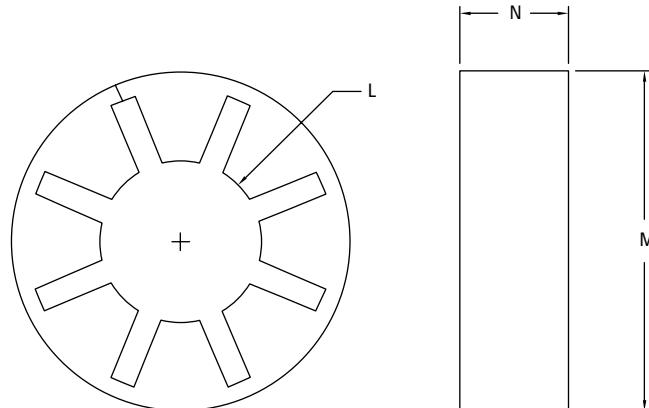

Fig. 7. QUICK FLEX insert.

Inserts and Covers

High-Speed Split Cover

QUICK FLEX High-Speed Split Cover

QUICK FLEX high-speed split covers are ideal in applications where high torque is combined with higher speeds while minimizing axial loading.

Note: Available split horizontally upon request specified as HVSPCOVER.

Fig. 9. High-speed split cover.

Single-Ended Spacer Coupling with High-Speed Cover

Covers on QF250 and larger are fixed in place by eight bolts.

QUICK FLEX couplings up to QF175 are machined with snap ring grooves to fix the cover in place.

Fig. 16. Single-ended spacer coupling with high-speed cover.

Double-Ended Spacer Coupling with High-Speed Covers

Covers on QF250 and larger are fixed in place by eight bolts.

QUICK FLEX couplings up to QF175 are machined with snap-ring grooves to fix the cover in place.

Fig. 19. Double-ended spacer coupling with high-speed covers.

Table 22. QUICK FLEX Insert Continuous Torque Ratings

Notes: ■ Bushing limits torque rating and speed rating.

■ Lovejoy is not affiliated with Reliance Electric Industrial Company, owner of the TAPER-LOCK® trademark.

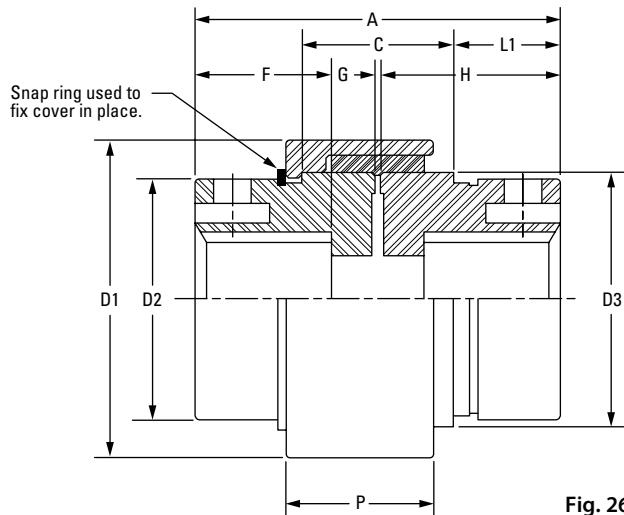

■ Dimensions are based on standard cover.

Splined-Hub Couplings

Splined Hubs

QUICK FLEX Splined Hubs

All of our splined-hub couplings come standard with blind set screws. Since the set screws never touch the shaft, there is never any damage to the splined shaft, all the while spreading the pressure over a larger area for a tighter compression.

Note: Splined-hub couplings are available with all cover and insert options.

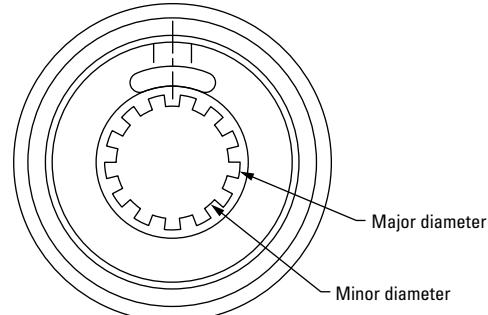

Fig. 26. QUICK FLEX splined hubs.

Notes: ■ 1 indicates: Standard mill-motor taper (1.25 in per foot on diameter).

■ 2 indicates: May need to use standard socket to tighten mill motor nut. Impact socket may not fit.

■ Dimensions are based on standard cover.

Notes

Storage of Components

Storage of Components

Lovejoy suggests the following storage guidelines for its coupling components

(hereinafter referred to as “products”):

- Unless directed otherwise by Lovejoy, products should be kept in their original packaging until they are ready to be placed into service
- Do not remove or alter any labels or stencil markings on the packaging
- Products should be stored in such a way that the packaging is not pierced, crushed or otherwise damaged
- After a product is removed from its packaging, it should be placed into service as soon as possible
- When removing a product that is not individually packaged from a bulk pack container, the container should be resealed immediately after the product is removed
- The relative humidity should be maintained below 60 percent and the surfaces should be dry
- The storage area should be kept free from airborne contaminants such as, but not limited to, dust, dirt, harmful vapors, etc.
- Extreme conditions of any kind should be avoided

Inasmuch as Lovejoy is not familiar with a customer’s particular storage conditions, these guidelines are strongly suggested. However, the customer may very well be required by circumstance or applicable government requirements to adhere to stricter storage requirements.

Upon receipt of a product shipment, ensure that the product is not removed from its packaging until it is ready for mounting so that it does not become corroded or contaminated. Product should be stored in an appropriate atmosphere in order that it remains protected for the intended period.

Any questions concerning storage should be directed to your local sales office.
